## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-14 and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Tachibana (US 2005/0029277). Tachibana discloses a chemical liquid injection system (Figs. 1-10) including: a liquid syringe (Figs. 2b and 3, syringe is 2) having a piston member (Fig. 2b, 2p) being inserted slidably into a cylinder member filled with a liquid, and a chemical liquid injector (50) having a liquid injection mechanism (52) for relatively moving the cylinder member and the piston member of the liquid syringe exchangeably mounted on the chemical liquid injector to inject the liquid into a patient; wherein said liquid syringe further comprises an RFID chip (3) having various types of data recorded thereon (paragraph [0048]), the RFID chip being mounted on said liquid syringe (Figs. 2b and 3), and said chemical liquid injector further comprises: an RFID reader (Fig. 3, 101) for obtaining the various types of data recorded on the RFID chip; and operation control means for performing a predetermined operation in accordance with at least

some of the various types of obtained data (paragraphs [0056]-[0058]). In reference to claims 1-5, 7, 8, 10 and 12 see Figs. 1-10 and paragraphs [0048] and [0056]-[0058].

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 15 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tachibana (US 2005/0029277) in view of Wilson et al. (US Patent No. 5,573,515). Tachibana discloses the device substantially as claimed except for a liquid warmer in associated with the injector. Wilson, however, discloses a similar chemical liquid injection system (Fig. 1, for example) as well as a heater to heat the liquid in the syringe (col. 8, lines 17-27). Therefore it would have been obvious to one of ordinary skill in the

Art Unit: 3767

art at the time of the invention to have modified Tachibana with the liquid heater to heat the contents of the syringe, as taught by Wilson, in order to provide a device that will administer liquids to patients that are close to body temperature to ensure that the patient is more comfortable.
